Robotic Survey, Repair and Agile Manufacture

Topic: Improved Production and Maintenance Processes in Shipyards
Programme: SOCIETAL CHALLENGES – Smart, Green and Integrated Transport

RESURGAM project aims a decisive break-through with Friction Stir Welding (FSW) as a high integrity, low distortion, environmentally benign, welding technique to be developed in steel, in air, to facilitate the modular construction of ships across multiple yards with final assembly at one master yard and the development of the process of underwater, robotic FSW to allow repairs to be carried out on marine structures without needing to bring ships or platforms ashore to a dry dock. These fabrication and repair capabilities, backed by the secure, digital Industry 4.0 infrastructure and techniques already in widespread use in the automotive and aerospace industries, will facilitate the rapid, coordinated but distributed modular manufacture of ships and watercraft throughout Europe.

DURATION

Start: February 1st, 2021
End: January 31st, 2024

PARTNERS

Coordinated by: EWF

BUDGETS

General Budget: € 6 123 140
EU Contribution: € 5 012 586

Co-funded by the Erasmus+ Programme of the European Union

This project has received funding from the European Commission's Research and Innovation programme under Grant Agreement Nr 101007005.
